FIELD NOTES:

Kingsley Corner Search and Remonumentation for the U.S. DEPT.
OF AGRICULTURE, FOREST SERVICE, in Township 2 North, Range
9 East, Hood River County, Oregon.

CREW: Lawrence E. Jones, Party chief.
David L. Tuttle, Party chief.
Robert Ulrich, Instrumentman
Doug Stroh, Chainman

REFERENCE: Tenneson Engineering Corporation, Work Order No. 5963.

DATE: October, 1979 to July, 1980.

In September, 1979 Tenneson Engineering Corporation was retained by the U.S. Forest Service, Mt. Hood Division, under contract 53-0467-9-00200, Kingsley Corner Search and Remonumentation, to conduct a search and where satisfactory evidence found, remonument certain section corners and one-quarter corners within Township 2 North, Range 9 East, Hood River County, Oregon.

Work was started October, 1979 by obtaining the General Land Office notes, topographic maps, a search of the County Surveyor's office for existing prior survey information, and all other data pertinent to the surveys performed in the general area to be searched.

Field work was started at the northwest corner of Section 34, as established in a prior survey for Champion International Timberlands, TEC work order #5963. The procedure used was to measure by use of a string hip chain and staff compass or steel chain and clinometer from the known corners, the approximate GLO calls to the location of each corner to be searched for. A temporary stake was established at each approximate corner or, if evidence found, the actual corner position. The line was then continued on to the next corner. The search pattern was run both in the east-west and north-south directions to provide a grid over the entire search area with ties from both directions. Adjustments were made where the grids intersect to confirm the approximate location of the corners. Where necessary the lines were corrected up and secondary searches mounted based on the corrected lines thus established.

The procedure resulted in search patterns which were felt to be within 50 feet at maximum of the true location of the corner positions. In all cases at least two such searches were conducted within the perscribed search areas. Only where evidence of the original corner, in the form of the original monument, visible blazes, scribes, bearing trees or bearing objects found were accepted as the evidence of the original GLO corner position. Where such evidence was identified

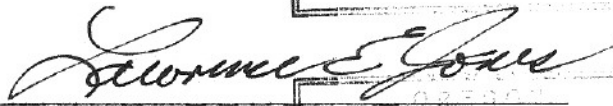

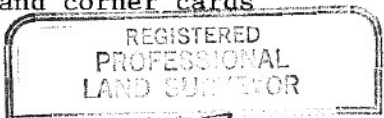

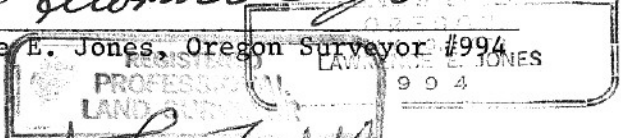

FIELD NOTES - U.S. Forest Service
Work Order #6002
August 12, 1980
Page -2-

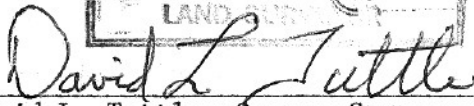

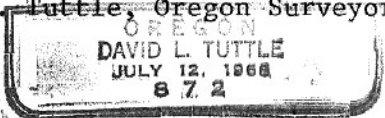

new U.S. Forest Service brass cap monuments set on 2-1/2" iron pipes, 30" long, set 24" in the ground. New witness marks, bearing trees were established to preserve the new monuments.

Corners searched for, those found and remonumented are shown on the attached plat Report Corner Search, Evaluation, Monumenting and Boundary Marking for the Kingsley Corner Search and Remonumentation. Individual corner evidence found, corner description and bearing objects are shown on the ten attached Forest Service corner search records, which by reference are made a part of these notes and this survey.

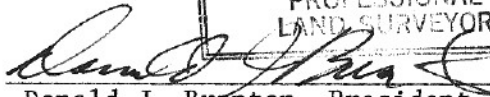

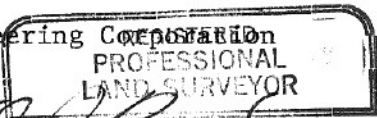

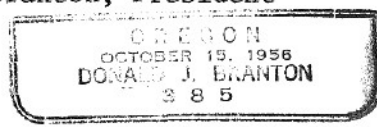

No actual traverse work or survey lines were run in the performance of this work, other than the measurement from the section corners to the bearing objects or bearing trees. Compass bearings used for directions at all points with a magnetic variation of approximately 23°.

We hereby certify the information covered in these field notes and corner cards represents a record of the work conducted under this contract.

 COUNTY SURVEYOR

FIELD NOTES:

DEPUTY
 Kingsley Corner Search and Remonumentation for U.S.
 Department of Agriculture, Forest Service in Township
 2 North, Range 9 East, Willamette Meridian, Hood River
 County, Oregon.

CREW: Lawrence E. Jones, Partychief.
 David L. Tuttle, Partychief.
 Robert Ulrich, Instrumentman.
 Doug Stroh, Chainman
 Donald J. Branton, Project Supervisor.

REFERENCE: Tenneson Engineering Corporation, W.O. #5963, July,
 1980 to July, 1981.

In September, 1979 Tenneson Engineering Corporation was retained by the U.S. Forest Service Mt. Hood Division under contract 530467-9-00200, Kingsley Corner Search and Remonumentation to conduct a search, and where satisfactory evidence is found, remonument certain section corners and one-quarter corners within Township 2 North, Range 9 East, W.M., Hood River County, Oregon.

The initial work under this contract was completed with survey notes of the corner recoveries filed under narrative dated August 12, 1980 for this project. Thereafter, because of the failure to find certain corners and the need for additional work in flagging and posting lines by the Forest Service, additional work was requested under the same contract. The work involved establishing the north and south one-quarter corners in Section 28 and posting the north-south centerline of the section and the north line of the east one-half of Section 28, and re-establishing by proportionate measure the corners along the lines common to Section 21, 22 and 15, 16.

Work was started by utilizing the corners already found under the contract and covered in the previous filing, tying them together with a survey traverse, utilizing the state coordinate system as established by the USC&G triangulation station on top of Mt. Defiance. Traverse closures were completed, running through the found monuments and positions computed for the missing monuments to be set by appropriate single and double proportionate measure methods.

Upon examination of the finished traverse it became evident that the evidence found at the southwest corner of Section 28 was grossly out of position for where the corner should be. Additional search was instituted for the corner in the approximate corrected position. No further evidence was found. Searches were conducted for corners to the south and west so the corner could be reset by double proportionate measure. The one-quarter corner common to Section 33 and 32 was found: a 12"x12"x8" stone and witnessed by a down fir being an original GLO bearing tree, and a bearing tree stump at correct call from the found stone. Extending west from the corner no evidence was found until the range line where the corner between 30 and 31 was located as evidenced by original GLO bearing trees.

The southwest corner of Section 28 was then reestablished by double proportioning, shifting the positioning 105 feet to the north and some 278 feet to the west of the corner position where we had previously believed the corner to be located as evidenced in our original submittal in this project.

The monuments found, established and bearing trees and witness objects set, together with the distances measured, bearings determined are shown on the attached survey plat map of the project, Tenneson Engineering Corporation W.O. #6002 and the photostats of the Forest Service Corner Record Search and Recovery cards, which by reference are made a part of these notes. We hereby certify the information covered in these field notes and corner cards represent a true record of the work conducted under this contract.

Existing brass cap used as property corner bears N. 58°18' E. 19.77 ft.

Work Done By Lawrence E. Jones Title Surveyor Date 6/80 State Registration No. or Agency LS 994
Certified Cor. Record Prepared? Yes No Filed At: _____ Date _____

REMARKS

Additional research indicates the original bearing tree snag found was set by J.L. Henderson in 1909. The 1" brass cap was set at GLO call bearing and distance and is in error. True position of J.L. Henderson corner as per call from BT snag is stone mound S. 58°18' W. 19.77 ft of 1" brass cap mon. Set 3/4" iron rod in stone mound. Henderson stated in his notes he believed this to be original corner position.
